

JomCode Coding Bootcamp

Development environment

Follow the visible steps and verify each result.

Install only what you need

- 01** Use the Windows or macOS path for each tool. Choose the current recommended stable Python and Node.js LTS releases.
- 02** Keep official download links visible; website wording may change. Check publisher and processor before opening an installer.
- 03** After installing, close old terminals and verify in a NEW terminal.

1 / Python — download and install

The screenshot shows the Python.org homepage. At the top, there's a navigation bar with links to Python, PSF, Docs, PyPI, Jobs, and Community. Below this is a search bar and a 'Donate' button. A secondary navigation bar includes links to About, Downloads, Documentation, Community, Success Stories, News, and Events. The main content area features a large banner for downloading the latest version for Windows, with a 'Download Python install manager' button. Below this, there's text about getting the standalone installer for Python 3.14.7 and links for other operating systems. A section titled 'Active Python releases' includes a timeline chart showing the lifecycle of various Python versions from 2.7 to 3.12, indicating end-of-life and security support periods.

Download the latest version for Windows

[Download Python install manager](#)

Or get the standalone installer for [Python 3.14.7](#).

Looking for Python with a different OS? Python for [Windows](#), [Linux/Unix](#), [macOS](#), [Android](#), [iOS](#), [other](#)

Want to help test development versions of Python 3.15? [Pre-releases](#), [Docker images](#)

Active Python releases

For more information visit the [Python Developer's Guide](#).

Python Version	Status	End-of-life	Security
Python 2.7	End-of-life	Yes	No
Python 3.6	End-of-life	Yes	No
Python 3.7	End-of-life	Yes	No
Python 3.8	End-of-life	Yes	No
Python 3.9	End-of-life	Yes	No
Python 3.10	Active	No	Yes
Python 3.11	Active	No	Yes
Python 3.12	Active	No	Yes

OFFICIAL SITE

<https://www.python.org/downloads/>

1. Windows: choose the install manager or recommended stable installer; follow its prompts.
2. macOS: select the macOS universal2 installer from the official downloads page.
3. Allow command-line access when prompted; open a new terminal after setup.

2 / Node.js LTS — download and install

The screenshot shows the Node.js download page. At the top, there's a navigation bar with links like Learn, About, Download, Blog, Docs, Beta Docs, Contribute, and Courses. A search bar is also present. The main heading is "Download Node.js®". Below it, there are dropdown menus to select the version (v24.21.0 LTS), operating system (Windows), and package manager (npm). A green banner provides information about getting the latest version. A code block shows Docker commands for installing Node.js. Below the code block, there are buttons for "Windows Installer (.msi)" and "Standalone Binary (.zip)". At the bottom, there are links to the changelog, release schedule, and source code.

node.js® Learn About **Download** Blog Docs Beta Docs ↗ Contribute ↗ Courses ↗

Q Start typing...

Download Node.js®

Get Node.js® **v24.21.0 LTS** for **Windows** using **Docker** with **npm**

Info Want new features sooner? Get the **latest Node.js version** instead and try the latest improvements!

```
1 # Docker has specific installation instructions for each operating system.
2 # Please refer to the official documentation at https://docker.com/get-started/
3
4 # Pull the Node.js Docker image:
5 docker pull node:24-slim
6
7 # Create a Node.js container and start a Shell session:
8 docker run -it --rm --entrypoint sh node:24-slim
9
10 # Verify the Node.js version:
11 node -v # Should print "v24.21.0".
12
13 # Verify npm version:
14 npm -v # Should print "11.19.0".
```

PowerShell Copy to clipboard

Docker is a containerization platform. If you encounter any issues please visit [Docker's website](#)

Or get a prebuilt Node.js® for **Windows** running a **x64** architecture.

[Windows Installer \(.msi\)](#) [Standalone Binary \(.zip\)](#)

Read the [changelog](#) or [blog post](#) for this version.

Learn more about [Node.js releases](#), including the release schedule and LTS status.

Learn how to [verify](#) signed SHASUMS.

Looking for Node.js source? Download a signed [Node.js source](#) or [tarball](#).

Check out our [nightly](#) binaries or all [previous releases](#) or the [unofficial](#) binaries for other platforms.

OFFICIAL SITE

<https://nodejs.org/en/download>

1. Select the LTS release, then choose your OS.
2. Use the prebuilt Windows .msi or macOS installer—not Docker for this class.
3. Keep npm selected in setup; reopen your terminal.

3 / VS Code — download and install

OFFICIAL SITE

<https://code.visualstudio.com/download>

1. Windows: choose User Installer for your processor; enable Add to PATH if offered.

2. macOS: choose the matching Mac build and move the app to Applications.

3. On macOS, run “Shell Command: Install code command in PATH” from Command Palette.

Git: check before installing

- 01 Run ``git --version`` first. VS Code's terminal uses your system Git; it does not mean VS Code installed Git.
- 02 If the command works, do not reinstall. If not, Windows: use git-scm.com/install/windows; macOS: accept the Command Line Tools prompt or follow git-scm.com/install/mac.

Version checks in a NEW terminal

TERMINAL >_ PowerShell / zsh

Windows PowerShell

```
> py --version  
> node --version  
> npm --version  
> code --version  
> git --version
```

macOS Terminal

```
$ python3 --version  
$ node --version  
$ npm --version  
$ code --version  
$ git --version
```

Every command must print a version. Stop and repair any missing command before chapter 2.

First saved Python file

TERMINAL >_ PowerShell / zsh

```
> code hello.py  
# Type into hello.py:  
print("Hello, JomCode")
```

```
# Windows:  
> py hello.py  
# macOS:  
$ python3 hello.py
```

Expected: Hello, JomCode. Save the file before running it.

Checkpoint

PROVE IT

Every version command returns a version, and a saved hello.py prints Hello, JomCode. No exercise.
